

Feature: The menu and booking policies

From build-plan: feature 5b

Status: verified

Branch: `feature/the-menu-and-booking-policies`

Goal

All three service pages still read "Prices are being set". The plan's job for the site is to answer "what, how much, and how long, without a DM", and today it answers none of the three. This feature fills the menu for nails, lashes and makeup, and answers the four booking questions a first-time client asks before she books: is there a deposit, how do I pay, can you take off what I have on, and what should I know before a first visit.

Decided by Frank on 2026-09-23, on Dani's behalf:

- **Prices are set now**, from Calgary research and positioned mid-low, rather than waiting for Dani. She checks them before launch.
- **No deposit**. Payment is **cash or card**.
- **Removing an existing set costs something**; the amount is set here.
- **First-visit guidance** is written from research.
- **The build-plan line is widened** from the menu alone to the menu and booking policies, so "how much, and how does booking work" lands as one piece.

In scope

- Rewording item 5b in `build-plan.md` to the approved scope.
- A treatment menu for all three services: labels in both dictionaries, rows in `data/treatments.ts`.
- **from** prices represented honestly in the `Service` structured data.
- Four new site-wide FAQ entries on the home page, in both languages.
- Regenerating the overview, which Frank runs.

Out of scope

- **The booking FAQ's Instagram line** and the hero's "send a DM on Instagram". There is no business account yet. That is the `/fix` queued next, not this feature.
- **Photographs for lashes and makeup**. A separate build-plan item, queued after the fix, inside the stock-imagery boundary Frank approved.
- **Online payment, deposits, availability**. Out of scope for the MVP in the project plan, and "no deposit" makes the second moot.
- **A price for the bride herself**. See Open questions.
- **Removing the empty state**. `TreatmentList` keeps its "Prices are being set" branch and its dictionary strings. Nothing renders it once the rows exist, but it is template behaviour: the next client starts with no prices too.

Build loop

`workflow.stepReview` is `feature`: work through every step and present one review packet at the end. `workflow.checkpointCommits` is `disabled`, so make no commits. `/complete` creates the single feature commit.

Build steps

- [x] **1. Reword item 5b in the build plan**. Approved by Frank on 2026-09-23. Replace the two lines of 5b with:

```
json { "@type": "Offer", "name": "Nail art, add-on", "priceSpecification": { "@type": "PriceSpecification", "minPrice": 5, "priceCurrency": "CAD" } }
```

Exact rows keep `price` plus `priceCurrency` , unchanged.

Done when the JSON-LD on `/nails` shows `minPrice` on the four `from` rows and `price` on the other five, and the build passes.

- [x] **5. Four booking answers in the FAQ.** New keys under `faq` in both dictionaries, and new rows in `data/faq.ts` , all `serviceId: null` so they appear on the home page and in its `FAQPage` data. New order:

| order | key | Question | |---|---|---| | 1 | `booking` | (existing) | | 2 | `deposit` | Do I need to pay a deposit? | | 3 | `payment` | How can I pay? | | 4 | `duration` | (existing) | | 5 | `firstVisit` | It's my first time. What should I know? | | 6 | `removalAndFills` | Can you take off a set from another salon, and how often do I need a fill? | | 7 | `location` | (existing) | | 8 | `cancelling` | (existing) | | 9 | `hair` | (existing) |

Answers, in her first person like the existing five:

- **deposit** - No deposit. You book, you come in, and you pay at the end of the appointment. - **payment** - Cash or card, at the end of the appointment. - **firstVisit** - Come with bare nails, or tell me what is on them so I can plan time to take it off. For lashes, arrive with no eye makeup or mascara, skip the coffee beforehand so your eyes stay still, and tell me about any allergies, because lash glue can contain acrylic or latex. Bring a reference photo if you have one, and plan for the full appointment time. - **removalAndFills** - Yes. Removal is on the price list for each service; mention it when you book so the time is set aside. Nail fills are every two to three weeks, lash fills every two to four.

No price appears in any FAQ answer. A price lives in exactly one place, `data/treatments.ts` ; restating "\$10" here would be the second copy that one day disagrees with the first.

The Spanish is written for someone already reading in Spanish, the same standing rule as every other string.

Done when the home page shows nine questions at `/` and `/es` , the `FAQPage` JSON-LD carries the same nine, and the build passes.

- [x] **6. Regenerate the overview.** Frank runs `/overview` , before `/complete` . Step 1 changes the build plan's text, and the overview's `TreatmentRow` note still says the menu is empty. `/complete` recomputes the fingerprint without regenerating the body, so skipping this leaves a stale overview that nothing flags.

Done when the overview describes 5b as the menu and booking policies, no longer says the menu is empty, and its fingerprint matches a fresh recompute.

Files / areas

| File | What | |---|---| | `blueprint/build-plan.md` | step 1, the 5b line only | | `dictionaries/en.ts` , `dictionaries/es.ts` | treatment labels for three services; four FAQ entries | | `data/treatments.ts` | the rows; the type and helpers are unchanged | | `data/faq.ts` | four rows, re-ordered | | `lib/schema.ts` | `serviceSchema` , the `from` branch | | `blueprint/context/project-overview.md` , `project-log.html` | step 6, by `/overview` |

Not touched: `TreatmentList.tsx` , `lib/format.ts` , the service route, `Faq.tsx` . Both components already render whatever the data holds.

Data / contracts

- **TreatmentRow is unchanged.** `priceCad` is whole Canadian dollars, `durationMinutes` an integer, `from` optional and defaulting to false, `order` ascending. `key` is constrained to that service's own labels, so a label and its row must be added together or the build fails. - **Every new dictionary key exists in both languages.** Feature 2's missing-string build error enforces it. - **Durations must agree with the existing duration FAQ answer**, which says a gel manicure is about an hour, a full set with extensions and art two to three hours, lash sets around two hours and fills about an hour. The tables above were chosen to agree; do not change one without the other. - **Fill cadence agrees with the lashes page**, which says fills every two to four weeks. - **Offer shape.** Exact: `price` (number) and `priceCurrency: "CAD"`. From: `priceSpecification` with `minPrice` (number) and `priceCurrency: "CAD"`, and no top-level `price`. - **Dictionaries are CRLF.** Edit with Node scripts that restore CRLF, re-measure endings after each write, and never use `sed -i`.

Testing

No unit test runner is configured and there is no `Browser tests` command. The gates are:

- `npm run lint` and `npm run build`. The build catches a missing Spanish label or FAQ string, and a treatment key with no label. - **In a real browser**, at 412px and desktop: all three service pages in both languages, and the home FAQ in both languages. A nine-row price list on a phone is exactly the kind of layout a build cannot vouch for. - Read the rendered JSON-LD on `/nails` for step 4, and on `/` for step 5.

Notes for the AI

- **Research, 2026-09-23**, which the prices were set against. Nails: City Nails & Spa lists acrylic full set \$50, Gel-X full set \$75, chrome \$20, nail art \$8+, gel removal \$5; Calgary Gel Nails lists tip removal \$15 and up; Salon Society lists a gel manicure at \$70+. Lashes: Lash Culture lists classic \$120, hybrid \$135, volume \$195; The Beauty Block lists introductory full sets at \$150 and fills at \$90; the city-wide range is \$100 to \$250 for a set. Makeup: Glam and Beyond lists grad makeup and bridesmaid makeup at \$150 each. The prices here sit below the middle of those ranges, which is the positioning the plan chose, and below established artists on makeup, because she is new. - **These are Frank's numbers until Dani says otherwise.** Nothing on the page says so, and nothing should; but the review packet must say it, and a client will book against them. The site cannot be indexed until the domain exists, which is what makes setting them now low-risk. - Keep the empty-state branch and strings. See Out of scope.

Open questions

1. **The bride herself is not on the menu.** The makeup page promises bridal work, and the menu covers the bridal party per person. A bride's makeup is a bigger, higher-stakes booking (usually with a trial) and Calgary prices it at two to three times a guest look. Leaving it off means a bride messages for a quote. Add a row now, or leave it off until Dani says she wants brides? Not blocking: the feature can ship either way.

Verification actually performed

| Check | Result | |---|---| | `npm run lint` | exit 0 | | `npm run build` | exit 0, 19 pages, run after the code steps and again at completion | | `/nails`, `/lashes`, `/makeup` and the three Spanish twins | every row, price and duration matches the tables above; "From" / "Desde" on exactly the `from` rows | |

`Service` JSON-LD on `/nails` | `minPrice` on the four `from` rows, `price` on the other five || Home FAQ, `/` and `/es` | nine questions; `FAQPage` JSON-LD carries the same nine in the same order; no answer contains a `$` amount || 412px phone width, `/es/makeup` | long labels wrap, prices stay in their column, no horizontal scroll || Console | no errors || Line endings | all six edited files pure CRLF || Overview (step 6) | 5b widened, "empty" note gone, fingerprint matches a fresh recompute |

Not verified

- **Whether the prices are right.** They are Frank's, set from research, and Dani has not seen them. That is a business check, not a build check. - **The desktop layout of the price lists** was read as text rather than looked at; only the phone width was screenshotted.

Implementation walkthrough

How the numbers were set

The overview had said since feature 5 that prices are "hers to set", and the service pages had carried "Prices are being set" ever since. On 2026-09-23 Frank decided to set them now rather than wait, from research, positioned mid-low, for Dani to confirm before launch. The research was done inside `/feature` rather than invented: live Calgary menus for nails (City Nails & Spa, Calgary Gel Nails, Salon Society), lashes (Lash Culture, The Beauty Block, OutLash) and makeup (Glam and Beyond). The sources and figures are in Notes for the AI above, so the reasoning survives if a number is questioned later.

Makeup sits furthest below the market, about half of an established artist's \$150 for grad or bridesmaid makeup. That was deliberate: she is new, and the page is priced for the client she can win now.

`data/treatments.ts` and the dictionaries

Eighteen rows across three services, each label added in both languages in the same script as its row. `TreatmentRow` constrains `key` to that service's own labels, so a label without a row, or a row without a label, fails the build; nothing about the type changed.

The dictionaries' three `treatments: {}` blocks were filled **by position**, not by anchoring on nearby text. In `es.ts` the lashes block sits after a closing brace with no unique neighbour, and both files list the services in the same order, so replacing the first, second and third occurrence in turn was the one approach that could not hit the wrong block. The script asserted exactly three before touching anything.

The comment above `treatments` had said the arrays stay empty until Dani says yes. It now says who set the prices, when, and why the empty-state branch is kept even though nothing renders it: the next client from this template starts with no prices too.

Durations that had to agree with an existing answer

The FAQ already told visitors a gel manicure takes about an hour, a full set with extensions and art two to three hours, a lash set around two hours and a fill about one. The menu's minutes were chosen to agree with that, not the other way round: 60 for a gel manicure, 120 for either full set, 105 to 135 for lash sets, 60 for a lash fill. Two sources stating durations is only safe while they agree, and the spec now says so where the next editor will see it.

`lib/schema.ts` - what "From \$5" means to a machine

`serviceSchema` gave every row `price: row.priceCad`, so a "From \$5" row told Google the charge is exactly \$5, the one claim the prefix exists to deny. `from` rows now carry a `PriceSpecification` with `minPrice`, and exact rows are unchanged. Found in the critique before any code was written, not in the browser.

The FAQ, and the price that was taken back out

Four answers joined the existing five: no deposit, cash or card, what to know before a first visit, and removals and fills. The first draft of the removal answer said "from \$10". The project's locked rule is that a price lives in exactly one place, so the answer now points at the price list instead. It would otherwise have been a second copy of the number, waiting to disagree with the first the next time a price changes.

The first-visit answer is researched rather than invented: bare nails or a warning about what is on them, no eye makeup or mascara for lashes, no caffeine beforehand, and allergies, because lash adhesive commonly contains acrylic or latex. The Spanish uses *pestañina*, the Colombian word for mascara, because she is Colombian.

One departure from the spec: the question reads "It is my first time" rather than "It's". The site's copy has no contractions anywhere, and the spec's wording was the odd one out.

Found, not fixed

On `/lashes` and `/makeup` a large empty band sits below the menu. The service route wraps `WorkStrip` in a padded `Band` unconditionally, and `WorkStrip` returns `null` when a service has no photographs, so the padding remains with nothing inside it. It predates this feature. The queued stock-imagery item puts images on exactly those two pages, which is the natural place to close it.

What is still open

- **The bride's own makeup** is not on the menu; the bridal party is. Open question 1 above, not blocking. - **The booking FAQ and the hero still say to DM on Instagram**, and there is no account. That is the `/fix` queued next.
